Education

Albert Ludwigs University Of Freiburg

Freiburg, Germany

Master of Science in Computer Science

Present

- Coursework: Machine Learning, Deep Learning, Digital Health, Advanced Algorithms, Systems Programming.

Fr. Conceicao Rodrigues Institute Of Technology, Vashi

Mumbai University, India

Bachelor of Engineering in Computer Engineering

June 2023

- Coursework: Computer Engineering, Data Structures, Object-Oriented Programming, Database Management Systems.

Technical Skills

Programming Languages: Python, Java, SQL, HTML, CSS

Data & ML: Jupyter Notebooks, Pandas, NumPy, Matplotlib, Scikit-learn, TensorFlow, Machine Learning, Deep Learning

Frameworks & Tools: Django, Spring Boot, React, Flutter, GitHub, GitLab, Google Cloud Platform, AWS EC2

Version Control: Git, GitLab

Work Experience

Accenture Solutions Pvt. Ltd

Mumbai, India

Associate Software Engineer / Packaged App Development Associate

Aug 2023 – Sep 2025

Python, Java, Spring Boot

- Developed and maintained data processing pipelines using Python and Informatica tools, handling large-scale structured datasets reliably.
- Provided technical ownership for application monitoring and issue resolution, maintaining system stability for a major insurance client.
- Collaborated with cross-functional teams in regular meetings, keeping documentation and communications current across changing requirements.

SofScript Systems And Solutions Pvt. Ltd

India

Software Developer Intern

Apr 2021 – Jul 2021

Django, Python, HTML, CSS

- Developed and deployed a client-facing service request portal to efficiently manage diverse inquiries related to healthcare services.
- Built the full-stack application on a Django platform, leveraging Python, HTML, and CSS to deliver a functional and user-friendly interface.

Personal Projects

Educational GPT Prototype | *Python, LLMs, Prompt Engineering*

May 2026 – Present

- Collaborating on an educational psycho-oncological support assistant prototype ("Krebs neu denken") under the supervision of Dr. Hendrik Mothes at the University Medical Center Freiburg.
- Analyzing Custom GPT behaviors to identify hallucinations and unsafe medical responses, establishing clear guardrails and system prompt boundaries.
- Structuring a safety-first knowledge base focused on psychoeducation, coping routines, and lifestyle factors while strictly avoiding diagnostic or therapeutic recommendations.

Conversational Translator - English and German | *Flutter, React, Android Studio*

Aug 2025

- Developed a real-time conversational translator for English and German, integrating speech detection and text translation capabilities.
- GitHub: [View link](#)

Product Matching System | *Python, WebScraping, SQL*

Jun 2022 – Apr 2023

- Engineered a robust system for visual product identification, utilizing image processing to compare and link items across disparate retail inventories.
- Optimized data parsing and matching logic to handle large datasets, ensuring high accuracy in linking similar products.

- Co-authored research on efficient product image matching and data integration within e-commerce platforms (In Progress).

Jarvis Voice Assistant | *Python, PyAudio, NLP*

Jan 2022 – Dec 2022

- Developed a Python-based voice assistant with core functionality for task automation and information retrieval.
- Implemented voice command processing to manage tasks such as time inquiries, media playback, and web browsing.

Examcell Portal Automation | *Python, SQL, React*

Jan 2021 – Jun 2022

- Developed an automated portal to streamline academic examination cell functions, reducing manual overhead.
- Integrated features such as a chatbot, digital form filling with verification, and semester-wise student tracking for improved administrative efficiency.
- Maintained version-controlled codebase with collaborative team contributions via Git.

Eye(I) Still Know - An App For The Blind | *Python, TensorFlow, Django*

Aug 2020 – Dec 2021

- Created an AI-powered assistive application for visually impaired users, featuring voice commands and facial recognition capabilities.
- Integrated obstacle detection through real-time image scanning, enhancing user safety and navigation.
- Co-authored research on this AI-powered aid published in International Journal of Engineering and Management Research (IJEMR), Jan 2021.
- GitHub: [View link](#)

Publications

Eye(I) Still Know An App for the blind

International Journal Of Engineering And Management Research (IJEMR)

Jan 2021

- Co-authored research on an AI-powered aid for the visually impaired, detailing its features including voice commands, image scanning for obstacle detection, and facial recognition.
- Certificate of Publication: [View link](#)

Product Matching System

Research Paper

In Progress

- Co-authored research on efficient product image matching and data integration within e-commerce platforms, contributing to advancements in retail technology.
